

User Story

1. As a user, I want to manage my photos on my phone so I can keep the best photos and save my phone memory.
2. As a user, I want a simple system to manage my photos, because the default management system is not user friendly.
3. As a user, I want an app to do this task, so I can access it anytime from my main screen without the need to go online.
4. As a user, I want the app to have a clear secured permission system, because I don't trust apps that have too much access to my personal information.
5. As an app user, I want the option to move my photos into different folders, in order to determine which photos are important to me and which are not.
6. As an app user, I want not to worry about exiting the app anytime and losing the work I have done, so I can stop or resume my photos sorting any time I want.
7. As an app user, I want to be able to rename these folders from the app itself, so I can put photos in different categories (interesting, not interesting, family, friends, travel...)
8. As an app user, I want to keep some photos in the original folder, because I don't feel that they fit in the other two folders.
